## Synopsis

More than half of the world's living species--from the hidden forests and exotic mammals of Madagascar to the multicolored birds and butterflies of Central America--are found almost exclusively within the rainforest canopy. Illustrated with 200 spectacular color photographs, *Rainforest* celebrates the diversity and beauty of the life in the world's rainforests. Each chapter covers a major rainforest region: Africa, Madagascar, India and Southeast Asia, Indonesia and the Philippines, Central America, the Caribbean, the (which has more plant and animal species than anywhere else on Earth), and Brazil, as well as the temperate rainforests in areas such as Tasmania and North America. The book details habitat, plants and animals, and threats to the precarious balance between humans and rainforests. The introduction provides an overview of the world's rainforests and a summary of current conservation issues. Reference material includes a color world map showing the major rainforests, suggested further reading, and useful addresses.

## Book Information

Series: MIT Press

Hardcover: 160 pages

Publisher: The MIT Press (January 27, 2003)

Language: English

ISBN-10: 0262151065

ISBN-13: 978-0262151061

Product Dimensions: 12.5 x 0.8 x 9.5 inches

Shipping Weight: 2.8 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #3,234,531 in Books (See Top 100 in Books) #59 in [Books > Science & Math > Nature & Ecology > Ecosystems > Tropical](#) #699 in [Books > Science & Math > Nature & Ecology > Forests & Rainforests](#) #1220 in [Books > Science & Math > Agricultural Sciences > Forestry](#)

## Customer Reviews

Rain forests are magical places. More than half of the world's species are found in just the canopy layer of these forests, which are found on every continent (save Antarctica) where rainfall is high throughout the year. Oldfield, botanist and author of *Rain Forests* (1996), presents a wonderful overview of both tropical and temperate rain forests. An introductory chapter discusses the biodiversity found in rain forests and the human impact on this diversity, both from indigenous

peoples and from extractive use by outside groups. Next, the major rain forest regions are surveyed in separate chapters. Africa is home to mountain gorillas and okapis. Tigers and rhinoceroses shelter in the forests of India and Southeast Asia. Central America leads the way in rain forest ecotourism, while the islands of the Caribbean contain only fragile rain forest fragments. The basin contains more than half of the world's remaining rain forest. Finally, the temperate rain forests of New Zealand and North America are home to the tallest trees in the world. Enriched with maps and magnificent photographs. An excellent primer on this imperiled ecosystem. Nancy Bent Copyright © American Library Association. All rights reserved

"Bottom line: both a lovely book and a substantial one." Infodad.com  
"This is a celebration of the flora and fauna of the world's rainforests." Wildlife Activist  
"While the text is informative, the photographs vividly depict the beauty of rainforest ecosystems...." Richard Walther's Green@Work Magazine

Both of the Sara Oldfield books I own are great (this one and Deserts). Amazing pictures and much better narration than you typically get in these type of books.
