Zoology 2: Swimming Creatures Of The Fifth Day (Young Explorer Series) (Young Explorer (Apologia Educational Ministries))

Synopsis

Take your kids on an underwater journey to explore the wonders of God's creation. They'll begin with a big splash from the whales and dolphins, then spy on seals and meet manatees before swimming with the sea turtles, snakes, and salamanders. Children will also uncover the hidden world of crustaceans, sea snails, clams, and their soft-bodied friends like the octopus, squid, and nautilus. From the microscopic to massive, no reef is left unturned in your child's passage through the waters of the world. Each lesson ends with an experiment or project reinforcing the scientific method. Among other projects, your student will try on blubber, investigate a shark's ability to sense electrical currents, explore how whales can hear sounds that come from faraway, and learn through experimentation which creatures make the best fossils. No matter how near or far you live from the ocean, your kids will love this study!

Book Information

Series: Young Explorer (Apologia Educational Ministries)

Hardcover: 235 pages

Publisher: Apologia Educational Ministries; 2006 edition (July 31, 2006)

Language: English

ISBN-10: 1932012737

Customer Reviews

Jeannie Fulbright and Apologia have answered prayer for this homeschool family with the Young Explorer Series. . . . A beautiful book! We absolutely love this series! --The Old Schoolhouse Magazine

Jeannie Fulbright is a mother of four who shares with her readers a love for God's Word, family, homeschooling, and science. She began speaking and writing in college as a sportscaster for the University of Texas and as a headline writer with the Daily Texan. Soon after her family set out on

their homeschool journey, Jeannie recognized an immense need for scientifically sound creation-based curriculum that would be both engaging for kids and easy for parents to use. Her background in science at the University of Texas inspired her to create the Apologia elementary science courses.

This book is fun to read to my second grader. Informative and interesting - what more could you want? Did you know shark pups eat their siblings in the womb? Me either. One of the many unusual facts we have found in both part 1 and part 2 of this series.

This book provides a good foundation for children who want to study ocean life. It is very detailed about many types of ocean creatures and their environments. It does seem to rely on the old standby of "We don't know why, but God made it that way!" explanation anytime there is not enough scientific support. There are a lot of good pictures to help illustrate concepts, and the activities are age appropriate for children in grades 2-5.

My kids and I enjoy this series and have many of the titles. I have avid readers in my home. My kids will often read these as they would any other book and come away with so much information. Its a great way to foster their love and knowledge of science and to be mindful of our Creator.

Forget the kids, I learn so much from these books. I love this series, even if they're religion based. Do yourself a favor and purchase the notebook journal as well and watch your kids flourish!

Love these books! They have great pictures, fun information, questions after each section to help you remember what you have read, and it is written with a creation viewpoint!

I just love this whole science curriculum! We have been using it for a few years now in our homeschool and the kids really enjoy it!!

This curriculum is so interesting and full of fun facts about creatures that live in the ocean. We are reading it this year for fun in conjunction with our other science.

This book has so much information but it written in a good flowing format that is easy for the kids to follow!
