From the Author: Top 5 Camera Features of the Nikon D3200

24.4 Megapixel sensor: The Nikon D3200 has a brand new sensor, a new 24.4 megapixel CMOS sensor that offers the highest output resolution for a DX camera (cropped sensor) in the Nikon camera line. The amazing part is that Nikon has increased the pixel count over the D3100 and at the same time has managed to improve on the image and video quality as well.

4 frames per second: In the continuous release mode, the D3200 can take up to 4 frames per second as long as the buffer isn't full. This allows you to capture fast moving action and sports shots easily. I really like to use the continuous shutter release mode which will keep taking photos as long as the shutter button is held down (up to a 100 images in a row). This allows me to capture action shots that I would have missed in the past.

EXPEED 3 processor: The Expeed 3 is the latest image processing engine from Nikon and is the same technology used in the top-of-the line Nikon D4 and the D800. The D3200 takes advantage of this technology both in creating great still images and in the video capture.

ISO Range: The D3200 has a wide ISO range from ISO 100 - ISO 6400 and can even be pushed to Hi1, the equivalent to ISO 12,800. Even more impressive is that relatively low amount of digital noise at the high ISO settings. This allows you to use the camera in low light situations without using the built in flash or an external flash unit. Using ISO 100 - ISO 400 will produce images that are virtually noise free and even at the higher ISO settings 800 - 1600 the noise is very low. At the three top ISO settings, there is more noise but even at ISO 6400, the noise can be dealt with in post production and usable images can be taken.

HD Video: The Nikon D3200 can shoot full 1080p HD video at 30 frames per second and while the built in microphone is not that great, the D3200 can utilize a wide variety of external microphones that will produce great sound as well as video. Taking video is as simple as pressing the Live View button and then pressing the dedicated video record button located behind and to the left of the shutter release button.

Selected Photos from the Book

ISO 200, f/2.8, 1/1000 second. When taking photographs of animals and pets, get down on their level it will make for a better image since it avoids the common "looking down" perspective. I used a very shallow depth of field to make the subject stand out from the background and a long focal length which kept me a safe distance from the dog. View larger.

ISO 400, f/2.8 and 1/3200 second. Using a very fast shutter froze this motorcross rider as he flew through the air. To use the 1/3200 second shutter speed, I used a wide aperture of f/2.8 and an ISO of 400 since it was a really bright day. If there was any less light, I would have had to use a higher ISO to achieve the 1/3200 shutter speed. View larger.

ISO 100, f/16, 30 second exposure. Using a very long shutter speed allowed me to capture this scene long after the sun had set. The water is rendered as smooth and there is no sign of the waves that were

present during the exposure. The camera was locked into a tripod so it didn't move during the exposure and the optional remote was used to trigger the shutter so I didn't even have to touch the camera. [View larger](#).

Master the D3200 and you'll be amazed at the images you can capture You have chosen an awesome dSLR, but so many of its powerful features will be wasted if you don't master all of the technology at your disposal. Start with the Quick Tour in this book to get a feel for the camera right away. Then learn to use each control, button, dial, and menu. Review basic photographic principles as you practice with your D3200, experiment with HD video and common shooting situations, use the Retouch menu, and much more. Master the varying functions of the D3200 buttons and dials Learn about the lenses, flashes, and microphones available for your D3200 Experiment with Live View and different focus modes Get shooting advice for abstract, sports, concert, nature, low-light, portrait, and travel photography Learn how to view and edit images in the camera Inside Æ& –â œ your free gray and color checker card to help you achieve accurate white balance and color

There is a lot of information here that you do not get from the product manual and it is easy to read and understand. The only thing that I do not like is that there was not enough info on properly using the video function and the recommended method of using the manual method ruins your movies especially on very low light situations.

I am new to Digital Cameras and was very glad to have this reference book written just for my new camera. It is very helpful to a novas like me. I have used it quite a bit, and it has really been a great help. My thanks to Mr. Hess for taking the time to put this information out there.

Excellent book, glossy pages, plenty of graphics and pictures to illustrate the camera's features and operation. If I can make room in my camera bag, I'll pack it in there. An excellent reference to learn the camera inside out.

I started learning more about the D3200 camera than I had through YouTube videos or the manual. Good explanations of different features. It not only covers the camera features but lenses and accessories, information on taking photographs, and post-production editing.

This book helped me understand my d3200 fast and some tricks as well.I deeply advise this book if

you just got a d3200 for your first dslr! It was on depth and fun to follow, I keep it in my camera bag.

Very detailed a must have for beginners like me. Truly helps you get the best quality from your camera. Also shows you things that most people would never know you could do. Highly recommend.

Knowing nothing about the D3200 or photography, I purchased this book. They take it step by step and explain it in layman's terms.

This is more than just a Field Guide for the Nikon D3200. It's a great book to understand the difference between a dSLR and a point and shoot type of camera. It is a user guide and it explains the workings of this camera.
