Practical Tips for Saving Money from J.D. Roth

1. Saving is mental ... and easier if you avoid advertising. One of the best ways to win the mental battle to save is to reduce your exposure to advertising. Fight this by ignoring ads, or by learning to question their premises.
2. Customize your saving (or, how to create your own Wii account). Each of us is different. We have different goals, we have different skills, and we have different mindsets. Don't think of saving as a chore. Think of it as the golden ticket to getting the things you really want. I set up what I call "targeted savings accounts" at my bank, and I use these to save for my goals. When I wanted a Nintendo Wii, I opened a separate savings account at my credit union and I called it "Nintendo account." The teller laughed at me, but she understood what I was doing. It helped me save. Each person needs to find a savings technique that matches her goals and abilities. If one method doesn't work, try another. Keep looking until you find a technique that works for you.
3. Starter goals: vacations, cars and retirement. A great way to develop the savings habit is to save for a vacation. We all love to take trips, right? Save for a fishing trip to Alaska. Save for a cruise to Belize. Save for a three-week tour of Paris. Whatever strikes your fancy. And once you've developed the saving habit, apply it to more practical things. Another great goal is to save for a car. Too many people allow themselves to be trapped by a lifetime of car payments. It doesn't have to be that way. Develop a system that allows you to pay cash whenever you go shopping for a new vehicle. Earn interest on your car money instead of paying interest to somebody else. And, of course, you should begin saving for retirement as soon as possible. This can be tough to do, especially if you're young. You think you've got decades to go, so why start today? You could use that money for a ski trip or a new iPad. But the sooner you start, the more time the extraordinary power of compounding has to

help your money grow. If you don't think you can afford to (or want to) set aside 10 percent (or 25 percent, like my wife), then start small. Start with 5 percent. Or even 1 percent. Develop the habit and increase your saving with time. 4. Limit your long-term goals and keep track of short-term tasks

I only set a handful of long-term goals at a time. In fact, this year I only have one long-term goal. If we set too many goals, we spread our attention, and we're less likely to accomplish any of them. But if we concentrate on just a handful of things at once, we're more likely to do what we dream. But while I don't have many long-term goals, I have a bunch of stuff I want to accomplish in the short term. To stay focused on these tasks, I use a simple but brilliant system I learned from Erica at erica.biz. I start on the first page of a spiral notebook. I make a brain dump of everything I have to do. Then I put the date at the top of the page. I refer to this list many times throughout the day, crossing things off the list as I go. If something else comes up that needs to be done, I add it to the bottom of the list. Every evening, I copy the list onto a new page and put the next day's date. This system works like a charm for me, not just for financial tasks, but for all tasks. 5.

Memberships/subscriptions you can cancel It can be difficult to give up things that we might consider "vices." For you, that might be the daily latte. For me, it's always been comic books. (Sad, but true.) These are constant money drains, but they also bring joy to our lives. Instead of giving these things up, I encourage folks to find ways to reduce them, or to save on them. But to really save money, look for ways to reduce recurring monthly expenses. These are constant drags to your budget, and if you can reduce them, it's a great way to improve your cash flow. Some examples: Cancel your cable television and start watching shows online at Hulu.com or similar services. Or, if that's too extreme, cut back from your deluxe digital package to bare minimum basic. I did this and saved over \$600 a year. Cancel your magazine and newspaper subscriptions. Yes, I know these industries are hurting, but so is your own budget. Cancel your gym membership. Find cheap ways to exercise at home, including biking and running and yard work. Bodyweight exercises (like pushups and situps) are free and effective. Cancel other monthly memberships. I used to pay \$15/month to play an online videogame. Not only was this sucking my time away, but it was costing me \$180 a year. I know that's not a lot, but when put together with other expenses, it can add up. Cancel your cell phone contract and move to pay-as-you-go. In other countries, prepaid cell contracts are the norm. But for some reason, in the U.S., they're the exception, not the rule. As a result, folks end up paying through the nose, either because they have more service than they need, or because they don't have enough. With a prepaid plan, you only pay for what you need.

Book Information

way that it doesn't consume you. </p> <p>-- Miranda Marquit, </p> (Miranda Marquit)

J.D. Roth is an accidental personal-finance expert--a regular guy who found himself deep in debt. After deciding to turn his life around, he read everything he could about money and finance. In 2006, he started the award-winning website Get Rich Slowly, which Money Magazine named the Web's most inspiring personal-finance blog. Over the past four years, Get Rich Slowly has grown into an active community where thousands of readers a month share ideas on how to improve their financial lives. J.D. lives with his wife and four cats in a hundred-year-old house in Portland, Oregon.

There are two books I tell people to read when they ask me about personal financial planning. Dave Ramsey's Total Money Makeover is one, and this one is the other. This book covers the topic in a very readable manner, is a tad less dogmatic than Ramsey's and includes some information that is not covered in Ramsey's book. Together the two cover a foundation every American should have on this important subject. I highly commend this book. One of the things I really liked about it is the hot links in the Kindle edition. This allowed me to touch a link and go to the site directly.

J.D. Roth's book is far more than a simple blueprint for managing personal finances, although it most certainly is that. It covers subjects as diverse and varied as the 'hedonistic treadmill,' which many people find themselves trapped on today; the reason why more money and 'stuff' won't necessarily make you any happier (or may even make you unhappy); and the finer points of retirement planning, debt reduction, and home/car purchasing. It is crammed full of useful pearls that, when taken as a whole, make the book an indispensable resource for navigating your way through everyday life and on into an uncertain future. Highly recommended.

This is a birthday gift to my ex boyfriend. We are both college students and need to learn how to manage our money. Of course I had to read it, although it is my ex boyfriend's. I learned about credit cards, annual and monthly budgeting. Because of this book, I have embarked on an experiment called "Track My Finance." This experiment will last a month and every time and everyday I spend money or gain money I write it down in a little mini book. At the end of the month I will see if there's any unhealthy habits in my spending. Then I will go back to the budgeting part of the book. That's another thing, you can skip around in the book based on what you want to learn about.

The best thing about this book is that it brings positive psychology concepts concerning the primacy of happiness as a life goal to bear on financial planning. The result is a helpful guide on how to set goals and begin financing the things that are really important to you, whatever they may be. The downside of this book is that, like many books based on blogs, it's really just an amalgamation of other resources. There are few, if any, original ideas or common threads to tie it together. Much of the information is basic (like what is an index fund). Other information is outdated and needs revision, such as that concerning how the mortgage industry operates. If you're totally new to the world of personal finance, this is a good starting point mostly to use as an annotated bibliography. But if you've already read books like "The Millionaire Next Door" and "Enough" you'll be disappointed.

J.D. Roth is one of the pioneers of personal finance blogging. I love how he says it's not all about math, it's about mindset/psychology too. Most of all I love how the entire theme of the book is do what works for you! This is what my parents taught me ever since I was a kid. He talks about debt, saving, investing, using credit wisely, retirement, etc. He covers everything. If you can only buy one personal finance book then buy this one.

I bought this book mainly to "give back" to the author for all of the great content I have read on his blog ([...]) over the past several years. Well, I ended up reading it cover-to-cover. Even though I had probably read all of the information before on his web site, the book does a great job of mixing the "big picture" goal-oriented discussions with practical advice for how to use money as a tool. I can see myself referring back to it again and again as I continue to apply the techniques I've learned. This would be a great gift for a young adult, or anyone trying to get themselves out of debt, but it is also useful for someone like myself who is trying to figure out what my financial goals are and how I might get there. Hopefully the author will write another book about his journey into the "Third Stage" of financial maturity: financial independence

I read JD's blog back in the day when it was still awesome. Part of the reason I bought this book was that I felt kind of indebted for all the free advice I had gotten over the years. Good advice. This book is an easy read. It has a lot of references to outside resources which makes it kind of textbookish. If you know nothing about personal finance this is a good book to read. If you think you know all, this is a good book to study.

I've purchased several money books during the past 3-4 years because I enjoy reading them and this one is my favorite. It's the first book I've read two times in a row simply because I liked it. JD Roth covers a lot of topics in a well organized and well written book on money and happiness. He relates it to his own life experience and the book is full of recommended web sites on dozens of money topics. He covers a lot of areas not necessarily found in other money books and talks about the emotional effects that money has on people. It's worth every cent.
